PLANTING INSTRUCTIONS

☘ Sunflower (*Giganteus*) ☘

① Grab a cup and two seeds. Fill the cup approximately 2/3 full with soil.

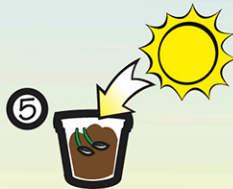

② Make two holes with your fingers in the shape of a "number two" push gently into the soil and put one seed in each hole.

③ Cover the seeds with soil adding more soil if needed. Seeds should be at a depth of 1/2"-1".

④ Water the soil to keep it moist (but not too much). Seeds will sprout in 3 to 5 days.

⑤ Be sure to place your cup in a warm sunny place. As your sunflower grows bigger you should transplant it into a larger pot or outside in the garden.
